## ***RED SPONGE***

### **Sponges for original filters**

Self-extinguishing, expanding polyurethane filter elements with an increased air and filtering capacity, designed for sporting applications.

You can recognise **Red Sponge** immediately by its distinctive Malossi red colour and the yellow trademark.

#### **Features:**

- Increased thickness with calculated porosity.
- Optimum filtering characteristics when dry which can be improved by moistening with Malossi oil.
- Selected material produced exclusively for specific use.
- Perfectly interchangeable with the originals they are especially suitable for high-performance engines.

## ***DOUBLE RED SPONGE***

Filter with double layers; the first layer has medium sized micro-pores to capture coarse dirt particles, while the second layer has very fine sized micro-pores to capture microscopic dust particles, the most damaging.

### **Technical specifications**

- Filters made of polyurethane foam, self-extinguishing, two layers coupled by a special hot forming process that does not alter its filtering characteristics.
- The first layer is made of a red filtering media: open cell polyurethane foam with a porosity of 45 ppi \*.
- The second layer is made of a black filtering media: open cell polyurethane foam with a porosity of 60 ppi \*.

(\*ppi: pores per inch)
