

X360 INTAKE MANIFOLDS

Fitting instructions

Attention:

The rubber manifold has a larger diameter than the aluminium flange's diameter in which the manifold need to be inserted.

Therefore it is recommended to closely follow the steps illustrated **(Fig. 1 - 2 - 3 - 4)**.

In this phase of assembly, do not use and sharp tools (such as screwdrivers. etc.) that could irreparably damage the rubber manifold.

We recommend heating the rubber manifold to a maximum temperature of 50° - 60° C to soften the rubber and facilitate the assembly.

We hope you found the above instructions sufficiently clear. However, if any points are not particularly clear, please contact us completing the special form inserted in the “contact” section on our Internet site (**malossistore.com**). We thank you in advance for any comments and suggestions you may wish to send us. So goodbye from us all at Malossi, and please accept our compliments. Have Fun. GOOD LUCK and ... see you next time.
